DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to polynucleotides encoding a thermostable cellulase, vectors and host cells and method of making the polypeptides, classified in class 435, subclass 69.1.
- II. Claims 23-29, drawn to a method of producing an active variant of a glycosyl hydrolase, classified in class 435, subclass 471.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are patentably distinct from each other. The polynucleotides of group I encoding thermostable cellulase is neither used nor made in the method of group II. They are subject to separate manufacture and sale. The groups have acquired separate status in the art and separate fields of search as further evidenced by their separate classification.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1652

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
